

1. What are you names?

2. What year was the Internet invented?

1969 - The first successful message on the ARPANET was sent by UCLA and Stanford Research Institute. The message text was the word login; however the l and the o letters were transmitted, and then the system crashed.

3. What year did the Queen send her first email?

1976 - Queen Elizabeth II of the United Kingdom sends out an e-mail on March 26 from the Royal Signals and Radar Establishment (RSRE) in Malvern as a part of a demonstration of networking technology.

4. How many hours of video were uploaded to YouTube every minute during 2015?

300 hours was added per minute - this grows every day!

5. How much profit did Apple make in 2015?

\$234 billion - more than the entire money in New Zealand and the Czech Republic banks!

6. What's the maximum time it would take a household computer to guess a 3 digit, letter-only password?

17.57 seconds - if you really wanted to hack a password, you could set several computers working together to speed it up!

7. How many iPhones would it take to control the first rockets in space?

Less than 1 - there is more power in one iPhone than there was onboard the rocket that took us to the moon

8. When was the first computer invented?

1823 - Charles Babbage created a 'difference machine' to calculate a series of values automatically. It used cogs and was very difficult and unreliable to use.

9. How many Internet users were there in the world in 2015?

3,185,996,155 - there is now Internet access for every point on the Earth (even the middle of Antarctica), but not everyone has a device which can connect to the Internet.

10. How many floppy disks have the same amount of memory as a 1gb USB stick?

You would need 711 (1.44 MB) floppy disks to equal 1 Gigabyte. This is assuming you are using the 3.5-inch floppy disk which had a higher capacity than the original 8-inch and then 5¼-inch.

11. In what year did computers start coming with mice instead of just keyboards?

1973 - This was the first home-computer with a mouse. Before that, people just used the keyboard to control a computer. However, mice as a form of control had been around as early as 1941, but they were used to control radar rather than for computers as we are.
